

EW

ELITE

WV

Homelink pairing is fairly straightforward, but can become a hassle if there is inadequate signal i.e. vehicle out of range, low batteries in the transmitter. All 2021 manufactured Elite openers are compatible with Homelink, Amazon Alexa, Google Home, IFTTT etc programming.

IMPORTANT: Please verify the batch barcode which is found on the toroidal transformer (inside PCB) or control box cover. If the barcode starts with A...then it is a late 2020 production model, and will not work.

Steps:

Initiate the Homelink pairing process according to vehicle manual

1. Hold the AAVAQ remote transmitter approx 1in away from Homelink buttons.
2. Press the open/close/stop designated button on AAVAQ remote while simultaneously pressing Homelink button
3. Continue to press AAVAQ remote button multiple times (while still holding Homelink button) until you have successful pairing.

If the above process does not work, your next option is to set up directly from the PCB. Select the "Learn" button twice (do not hold down) on the control board, then proceed to press the Homelink button until the process is complete.
